Overview

The Ten Year Property Plan has a planned site infrastructure upgrade project that will remediate an area of subsidence in the south eastern corner of the site. The contract will also look to improve surface water collection and disposal which appears to be a cause of the isolated ground movement.

Work will comprise of some timber retaining wall construction, the provision of a section of dish drain and introduction of a new sump.

In the same vicinity an old resource storage building will be reconstructed on top of an existing timber framed and cantilevered platform.

The scheme will be traditionally executed with a full design team employed by the Clifton Terrace Model School Board of Trustees producing full construction documentation.
