Alternate Physical Delivery Address :  
Alternate Physical Fax Number :

## Overview

Massey University (Massey) is a top-tier and innovative research and teaching university supporting cutting edge research programs and well recognized degree programmes. Our School of Veterinary Sciences (SoVS), being a state-of-the-art facility offers New Zealand's most comprehensive veterinary expertise.

SoVS is currently looking to gather market information for a Fluoroscopy unit. We require a C-arm mobile fluoroscope unit to be used for myelograms (yes, we still do them), swallowing studies (need high frame rate), urinary tract studies (e.g. retrograde urethrograms) , intra-op orthopedics. We need a unit with nice subtraction capabilities to allow us to do a few more vascular procedures ( eg patent ductus arteriosus occlusions, intrahepatic portocaval shunt coil placements)”.

We encourage all capable suppliers to respond to this RFI and submit their expression-of-interest by providing relevant information including an estimate price range. In your submission, we expect to see full technical details of your product offering, warranty and service provisions, total expected life of the product, estimated charges for yearly maintenance and any support after expiry of the warranty provisions.
