T0478 - Automatic Light Dues Information System (ALDIS) Support Provision

Buyer: The Corporation of Trinity House

Description:
The Automatic Light Dues Information System (ALDIS) was developed in two phases over 2004 and 2005 by two different developers. It is written in Java and although currently supported by the developer who wrote the second phase of the software, Trinity House now needs to transition support to a new developer.
The key functions of ALDIS are:
• To allow Light Dues certificates to be issued by the 'Collectors', usually shipping agents affiliated to the Institute of Chartered Ship Brokers and appointed as Light Dues Collectors, and
• To record port record arrival data to verify the movement of vessels arriving to UK & RoI ports and their liability to pay Light Dues.
The ALDIS software (code and IPR) is owned by the General Lighthouse Authorities (GLAs) and funded from the General Lighthouse Fund (GLF).
