

Secure by Design (SbD)

Buyer: Defence Digital, Ministry of Defence

Description:

The Cyber Resilience Programme require a supplier to deliver the Secure by Design outcomes. The SBD project will develop and implement a new approach for security in Defence by embedding security as a fundamental element of the system design process.

The end state of SbD will be a Continual Assessment approach which will be developed and implemented to replace the current accreditation process. SBD will develop the policy, process, tools, and guidance that can be used by projects to better define their security understanding and develop and implement better security solutions. It is important to note that policy, process and tools will all be in support of the wider objective of improving the security culture. That is, Secure by Design will change what MOD staff, collectively and individually, perceive as acceptable and desirable behaviour, aligning with best practice in industry. This will make knowledge sharing easier, as well as ensuring that security is commensurate with the Defence Tasks. Whilst this activity will be focused on security, it is likely that this culture shift will also benefit MOD procurement and project management more widely, as has already been evidenced by the Alpha activity.
