Title

Provision of Services to Support Economic Modelling of Energy Demand and Supply Sectors

Description

The 'Economics of Climate Change, Energy and Transport' unit of the Joint Research Centre supports the EC's European Green Deal by performing economics-based research in the fields of energy, transport and climate change. The unit develops and applies a number of quantitative tools, such as POTEnCIA, POLES and the corresponding databases (including JRC-IDEES), to analyse the impact of different policies on the energy demand and energy supply sectors. Their output supports the European Commission's preparatory work of legislative proposals related to climate mitigation and energy policy, such as the European Green Deal. The purpose of this contract is the provision of consultancy and support services in the aforementioned areas of activity by:— enhancing the in-house state of the art of understanding and characterisations of key technological evolutions and of their effects;— ensuring the timely update of key elements of the databases that are part and parcel of the in-house tools.
