Title

Human serum for estradiol CRMs

Please note that this is not a call for tenders but a publication announcing the Contracting authority's [intention to publish a future negotiated low or middle value procedure](#).

Description

JRC plans to replace BCR-576, 577 and 578 (CRMs for the measurement of estradiol in human serum). For producing the new CRMs, human serum samples with different concentrations of estradiol are needed. Request for human serum samples, organised as individual donations of specific clinical profiles for the commutability/feasibility study and production of ERM-DA576, 577 and 578. Each individual human serum sample, collected and produced according to CLSI-37A protocol (Danilenko et al, Clin Chem Lab Med 2020, 58, 368–374), should correspond to a predetermined concentration range of estradiol.
