Title

Horizon Europe Project: Digital Transformation – Case Studies for Aviation Safety Standards

Description

The research project aims at evaluating a series of changes applied to aviation products, processes and operations resulting from the deployment of new digital solutions with a focus on measuring the impact on safety standards and regulatory materials as well as to prepare their evolution. The project will build upon a series of case studies allowing to develop a comprehensive investigation of the key changes at stake, by developing several working examples (use cases and conceptual models), analysing the impact on the working processes, the safety management processes, and the existing regulatory standards. Such case studies will lead to the identification of key actions to be taken by safety regulators, service and solution providers to streamline the deployment of such innovative digital applications.
