**Title**

Background Data Collection for Future EU End-of-Waste Criteria of Construction and Demolition Waste

**Description**

The objective of this study is to support the Commission in collecting data and information on construction and demolition waste. This data shall be sufficiently robust and relevant to be able to serve as a basis to develop future end-of-waste criteria. Using the data collected, the study will also analyse any beneficial and adverse impacts associated with secondary materials deriving from the construction and demolition waste streams studied, and propose a ranked list of recommended waste streams for future development of EU-wide end-of-waste criteria.
